

Original Skid steer: The indispensable multi-tool

The environmentally friendly and compact SHERPA 100 ECO can now do the physically demanding indoor work that you used to do manually. This nifty machine is extremely quiet and doesn't produce any unpleasant exhaust fumes. This mini loader is real value for your money. And if you need the SHERPA 100 at a different location, transporting is simple. Simply put it on a small trailer or inside a delivery van. No special equipment is needed.

The 76-cm wide mini compact loader is powered by a surprisingly strong 2-HP front-mounted electric motor. Pressing the accelerator quickly builds up the pressure in the system. The space that normally contains the combustion engine now stores a 360-Ampere battery pack that powers the mini skid-steer for up to 8 hours. The SHERPA 100 ECO is so easy to hop on and off that you don't have to think twice about using it. Once in use this mini skid steer proves itself every time. With its small turning radius of only 120 cm and its narrow width of just 76 cm, it is now possible to pass through every door in very narrow spaces. Tire pressure is only 1 kilogram per square cm so the SHERPA 100 has no problem completing the job on each floor.

The all new SHERPA MINI-LOADER
